# NATURAL AND ENVIRONMENTAL SCIENCES

BACHELOR'S DEGREE

UNIVERSITÀ  
DEGLI STUDI DELLA  
TUSCIA

The conservation of our planet's resources represents a challenge that cannot be postponed for future generations and requires, especially in Europe and Italy, new models of economy and society.

The Degree Course in Natural and Environmental Sciences provides knowledge for the interpretation and analysis of natural systems, studying both their biological and physical aspects. The course allows you to gain integrated insight on Nature, an overview of the diversity and richness of living organisms and the scientific methodologies required for the interpretation and analysis of systems, processes, and problems of the natural environment.

Indeed, this Degree is characterized by the integration between Earth Sciences and Life Sciences, combined, in turn, with a solid basic knowledge in the areas of mathematics, physics and chemistry, as well as applied skills coming from engineering disciplines and Agricultural Sciences. The course prepares, therefore, to the exercise of naturalistic, environmental, and scientific teaching professions.

Graduates in Natural and Environmental Sciences respond to the demand of the job world in the fields of environmental monitoring, nature protection, territorial planning and remediation of contaminated sites, naturalistic and environmental dissemination and didactics.
