## **ANNUAL ERCIS NETWORK WORKSHOP: Towards a Safer AI**

ERCIS is a dynamic and thriving international scientific collaboration network that comprises universities, research institutions and companies united in the world of information systems and digital transformation. The network partners meet once a year in a thematic workshop to promote collaborative activities in research and teaching. This year, the annual workshop is hosted by the University of Tuscia, by Prof. Alessio Maria Braccini, a network partner. This event marks the beginning of the working activities for the 2024 edition of the ERCIS annual workshop. During this event, the network and the university will present themselves to the public, illustrating their activities and opportunities for international collaboration in research and teaching. The network will also present the workshop's topic—towards safer artificial intelligence—which will see participants collaborate in exploring the risks of generative artificial intelligence technologies and the strategies that individuals and organisations can implement to address them.

Speakers at the event will include:

- Alessio Maria Braccini, University of Tuscia, ERCIS network representative for Italy
- Ines Delfino, University of Tuscia
- Marcella Barone and Carlo Contardo, University of Tuscia
- Jörg Becker, University of Münster, Germany
- Jan vom Brocke, University of Münster, Germany
