## DIGITAL INFORMATION

MASTER'S DEGREE

The second-level degree course in Digital Information is an interdisciplinary course which aims at providing **scientific knowledge and technological competences** for the **production and management of content and information in digital environments** by connecting them with knowledge in humanities.

The degree course's general aim is that of training second level degree graduates with **high-level technological and IT competences** who are able to operate in an interdisciplinary way for the **management, planning, promotion and use of information and communication** and who can come up with solutions to complex problems in a digital and cross-media environment.

The three subject areas included in this degree course are: **IT and technology, Media Studies and Humanities**. The course provides specialised training in these different areas, allowing students to get familiar with **research methods, production and organisation of information**, recognise and identify the **most effective IT tools** for the treatment of information and to identify the issues related to the systems' safety and reliability .
