COMMUNICATION, TECHNOLOGIES AND DIGITAL CULTURE

BACHELOR'S DEGREE

This three-year degree program leverages the **multidisciplinary nature** of the Department of Legal, Social and Educational Sciences and aims to provide a solid foundational preparation to address the various aspects of communication processes in contemporary times.

Our specific mission is to develop an interdisciplinary understanding of the most common issues in both face-to-face and mediated **communication processes** and provide specific and foundational knowledge focused on the four main areas of the program in mutual integration: **Humanities, Media Sciences, Technology, Law and Economics.**

The teaching method adopted involves the horizontal and vertical integration of knowledge based on a solid cultural and methodological foundation, achieved both through **academic study** and various **practical activities**, such as **workshops**, focused on the ability to tackle practical problems and apply knowledge and skills.

With a strongly interdisciplinary approach, the aim is to provide a thorough understanding of culture, communication issues, and possibilities, taking into account a global context characterized by constant technological transformation and the presence of digital media in daily life.

The degree program aims to provide communication, technological, IT, and linguistic skills in order to establish a solid foundation for the "digital communicator."
